A GUIDE FOR PARENTS-TO-BE ON

Generation®
da new era in prenatal testing

NON-INVASIVE PRENATAL TESTING

1800 822 999

Genomic Diagnostics
LEADING THE WAY TO IMPROVE HEALTH
A revolutionary advance

What is the *Generation*® non-invasive prenatal test?

Non-invasive prenatal testing (NIPT) is a revolutionary advance in prenatal screening which can detect genetic material (DNA) from the placenta in a blood test from the mother. In the past, the ability to test DNA from the fetus required much more invasive methods such as amniocentesis or placental biopsies, which are not without risks to mothers and their babies. NIPT is a simple and highly accurate test which may help avoid more invasive techniques of prenatal testing.

The *Generation*® non-invasive prenatal test (NIPT) screens for the most common chromosomal abnormalities that can affect your baby’s future health using a simple blood test. The *Generation*® NIPT is available from as early as the 10th week of pregnancy, for both singleton and twin pregnancies.

Your doctor may recommend the *Generation*® Plus test which also tests for microdeletions when there are reasons to do so.

How does the *Generation*® test work?

During pregnancy, some of the baby’s DNA from the placenta crosses into your bloodstream. A sample of your blood is drawn from you, and the *Generation*® NIPT tests this DNA to identify certain chromosome conditions in your pregnancy. The *Generation*® test takes a deeper approach to the science, using an advanced technology called “Massively Parallel Sequencing” to analyse millions of DNA fragments per sample and accurately count the number of chromosomes present and determine if there are too many or too few copies of the tested chromosomes in your baby.
in prenatal screening

Is the Generation® test right for me?

The Generation® test offers parents-to-be a new choice to obtain important information about the health of their developing baby, simply, accurately and in the first trimester (at 10 weeks), with little or no risk to their pregnancy.

This screening test may be an option for you to consider if:

• You are 35 years or older at the time of delivery (32 years or older for a twin pregnancy)
• You have an abnormal or “positive” serum screen
• Your ultrasound shows concerns or abnormalities with fetal growth and/or development
• You have a personal or family history suggestive of a chromosome disorder (e.g. Down syndrome)

Clinical best practice guidelines from Australian and international medical societies recommend that all pregnant women, regardless of risk status, be offered the opportunity for discussion and choice regarding NIPT and other available prenatal screening and diagnostic tests1,2,3,4,6,7,8.

What kind of conditions can the Generation® test detect?

Chromosomes normally come in pairs. Healthy people have 23 pairs of chromosomes, with one pair which determines sex. Men normally have an XY pair of sex chromosomes, and women normally have an XX pair of sex chromosomes. Any more or less can lead to mental or physical disabilities, with different levels of severity.

The Generation® NIPT looks for too few (missing) or too many (extra) copies of chromosomes, which are often associated with these disabilities. The most commonly seen and tested for include an extra copy of chromosome 21 (Down syndrome), or an extra copy of chromosome 18 (Edwards syndrome), or chromosome 13 (Patau syndrome) and sex chromosome aneuploidies, all of which can be accurately detected with the Generation® test.
**Why the Generation® test?**

Compared to similar options, the Generation® prenatal test offers accurate, near diagnostic information, rather than calculating chances or risk scores. It does not carry the risk of complications that an invasive procedure can.

- **It’s simple.**
  A single tube of blood drawn from your arm;

- **It’s convenient.**
  You can have blood collected in one of our collection centres from as early as 10 weeks;

- **It’s accurate**\(^1\)\(^,\)\(^2\)\(^,\)\(^5\).

- **It’s tested in Australia.**
  Your Generation® test is performed in Australia. (Generation® Plus tests are performed in California).

- **It’s reliable.**
  It has the lowest test failure of any NIPT (0.1%);\(^1\)

- **It’s fast.**
  Your healthcare provider will receive your Generation® test results within 5-7 days from sample collection**. The Generation® Plus test including microdeletions is reported 9-14 days from collection due to sample transport times to California.

How will my test be reported?

Your test report will include one of two possible results for chromosomes 21, 18, 13, X and Y.

1. **No Aneuploidy Detected** — means the expected number of chromosomes was found

2. **Aneuploidy Detected** — means too many or too few copies of one of the chromosomes have been identified. A diagnostic test for confirmation is recommended and should be discussed by your doctor

Do normal Generation® test results mean that my baby will be perfectly healthy?

The Generation® and Generation® Plus prenatal tests are highly accurate advanced screening tests that are non-invasive. No test, however, can guarantee a baby will not have any medical issues. They do not test for, or report all, genetic and non-genetic problems that may be present in a baby.

† Sex chromosome aneuploidy testing is available for singleton pregnancies only.
How do I organise to have the test?

1. Make an appointment to see your medical practitioner and discuss the Generation® NIPT

2. Complete the request form with your doctor (go to www.generationNIPT.com.au)

3. Contact our Customer Care Team on 1800 822 999 to prepay and identify the most conveniently located Generation® collection centre

4. Bring the request form to your appointment. Your blood sample will be taken and sent to the lab for testing

5. Your Generation® NIPT is performed

6. Your results are delivered to your medical practitioner
Does Medicare or private health insurance cover the cost of the Generation® prenatal test?

The Generation® prenatal test does not qualify for a Medicare rebate. Payment for the Generation test for chromosomes 13, 18 21 and sex chromosomes is payable prior to sample collection by calling our Customer Care Team on 1800 822 999.

Generation® NIPT

- A simple, one tube blood test
- Safe from procedural risks of invasive procedures (amniocentesis/CVS)
- Lowest test failure rate among non-invasive prenatal tests
- Fast results—usually available to your doctor within 5-7 days from collection (Generation® Plus results take 9-14 days from collection).

To learn more about the Generation® prenatal test please call 1800 822 999 or visit www.generationNIPT.com.au
